

## Project

Thursday, October 31, 2024 4:40 PM

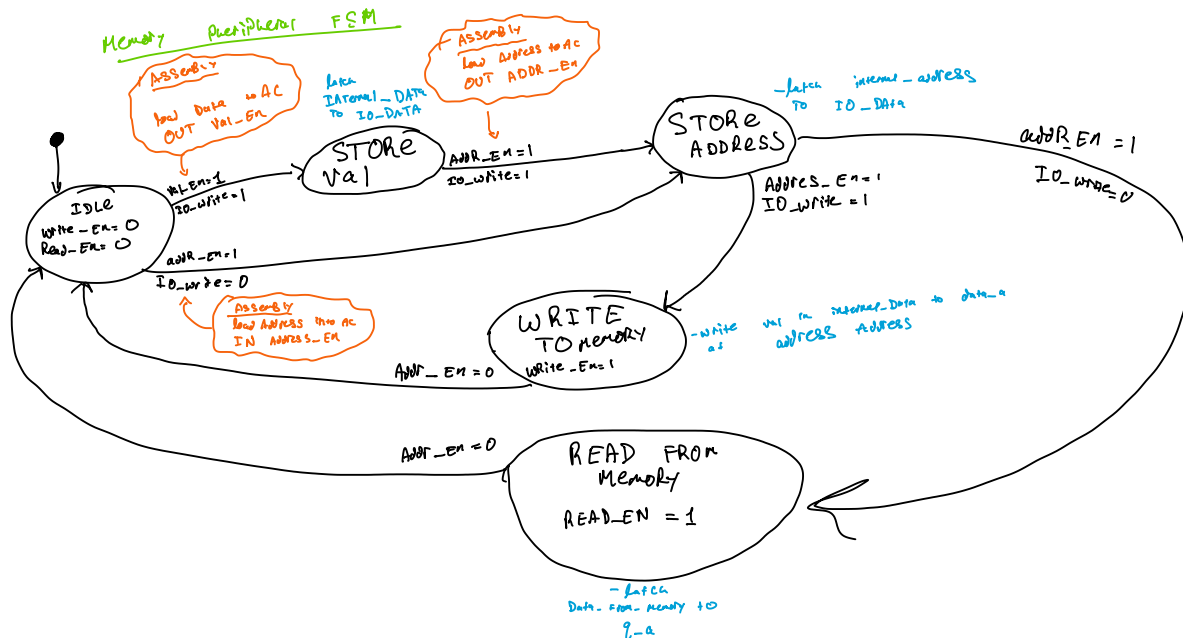

## Steps to Store Data

- ① Load val into AC
  - ② OUT MEM-EN
  - ③ Load address into AC
  - ④ OUT ADDR-EN
- IO-Write will be 1  
DATA-EN will be 1 ⇒ latch Internal-Data onto IO-Data
- IO-Write will be 1  
ADDR-EN will be 1 ⇒ latch Internal-ADDR onto IO-Data

## Steps to Read Data

- ① Load address into AC
  - ② IN ADDR-Val
- ⇒ Write to memory
- IO-Write will be 0  
ADDR-EN will be 1 ⇒ latch IO-Data to q-a
- ⇒ Read operation

# TriState Buffers in Memory Peripherals
